Colrstudio.com - Font Package Catalog

Version 1.0

How to Use These Fonts

These fonts are designed for two main workflows: Creating production-ready Layered SVGs for cutting and heat transfer via our engine, or traditional design work in supported applications.

1. The Easy Way: Create Layered SVGs (Recommended)

****No installation required.****

For the best results with Cricut Design Space, Silhouette Studio, or Brother CanvasWorkspace, do not install the font.

1. Go to ColrStudio.com.
2. Upload the `.otf` file (or select it from your library).
3. Customize colors and layers.
4. Export as Layered SVG.

* **Result:** Perfect, cut-ready files with no manual cleanup needed.

2. The Pro Way: Installation

Use this method if you want to type directly in Photoshop, Illustrator, or other design apps.

Windows

- Extract the ZIP archive.
- Right-click the `.otf` file and choose "Install" or "Install for all users".

macOS

- Double-click the font file.
 - Click "Install Font" in the preview window.
-

Troubleshooting & Compatibility

■ Why is the font black / monochrome?

If you see a solid black shape instead of colors/outlines, your software does not support the COLRv1 standard yet.

- Solution: Use ColrStudio.com to generate a PNG or SVG image and import that into your software.

>■ Cutting Software (Cricut, Silhouette, Brother)

These programs often cannot read Layered Color Fonts directly.

- For Multi-Color/Layered Designs:** Use the ColrStudio Web App to export an SVG.
- For Single-Color Text:** You can install and use the Monochrome version of the font directly.

■ Adobe Apps (Photoshop, Illustrator, InDesign)

- The fonts work natively. Colors and layers will appear automatically after installation.

Monochrome / Standard Versions

MONOCHROME

The MONOCHROME folder provides single-color fallback versions. Use these files in software that does not support the COLRV1 color format (e.g., Microsoft Office), or if you simply need a clean outline version.

License

License & Usage Rights (Demo Fonts)

These demo fonts are derived from open-source typefaces and are licensed under the **SIL Open Font License (OFL) v1.1**. This ensures maximum freedom for your creative projects. The Licence is included in every base Font and generated variations.

1. The Font Software (Gen0 / .otf)

You are free to use the font files themselves under the following terms:

- **Commercial Use:** You may use these fonts for personal and commercial work.
- **Redistribution:** You may share these fonts with friends or colleagues (provided the license file is included).
- **Modification:** You may modify or extend the fonts (as long as you rename them and release them under the same license).
- **Selling:** You may **not** sell the font files themselves as standalone products.

2. Your Results (Gen1 / Graphics / SVGs)

Everything you create using these fonts—whether generated via the **ColrStudio Engine** or designed locally on your computer—belongs to you.

- **Unlimited Usage:** You may use the resulting graphics, logos, SVGs, and plots for any product (T-shirts, merchandise, websites, print, etc.).
- **No Royalties:** There are no fees or royalties for using designs created with these fonts.
- **Your Copyright:** You own the copyright to the artwork and designs you create.

In short:

The font is the tool (free to use under OFL). The design you build with it is your property.
